

With integrated
step counter

Count on it!

The Multipipette® M4 and Combipips® advanced pipetting system:
simple, stress-free and ergonomic

Serial pipetting made easy

The Multipette M4 makes performing long pipetting series easier and faster. The aspirated liquid can be dispensed up to 100 times without refilling the tip.

reddot design award
winner 2013

How it works

A Combitips® advanced dispenser tip, in the required size, is simply attached and automatically recognized via a sensor in the Multipette M4. The volume is set using the selection dial and is automatically shown in the display. Now all you have to do is aspirate the liquid with the filling lever.

The desired volume can be dispensed in several steps using the utmost precision. Dispense the same volume up to 100 times without refilling the tip – a logical solution for filling 96-well plates.

The executed dispensing steps are counted using the step counter feature and shown in the easy-to-read display. After use, the dispenser tip is simply ejected by pushing a button and disposed of without the risk of contamination or directly touching the tip.

Simple operation, unique flexibility and significant time savings make the Multipette M4 an important liquid handling tool for both novel research and routine tasks.

Position of the volume selection dial:

	0.5	1	1.5	2	2.5	3	3.5	4	4.5	5	5.5	6	6.5	7	7.5	8	8.5	9	9.5	10
Maximum number of dispensing steps:	100	50	33	25	20	16	14	12	11	10	9	8	7	7	6	6	5	5	5	5

* The 25 mL and 50 mL Combitips advanced can only be used with the supplied adapter.

The right Combitip advanced is always at your fingertips!

9 different volume sizes (0.1 mL–50 mL) for the Combitips advanced, along with the Multipette M4, offer a unique dispensing range of 1 µL–10 mL. With 4 different purity grades (Eppendorf Quality, PCR clean, Forensic DNA Grade, Biopur®), you will always find the right tip for your application.

Multipette® M4 – Reaching Beyond a Pipette's Limitations

The ideal precision instrument for completing long pipetting or dispensing series. Even liquids which are difficult to pipette are no match for the Multipette M4.

With the Multipette/Combitip system, volumes are dispensed using the positive displacement principle. The liquid is directly dispensed without an air cushion, ensuring the correct volume is always dispensed regardless of the density,

viscosity and volatility of the liquid. In addition to serial dispensing, the Multipette is also the perfect instrument that is able to go beyond the limitations of a standard pipette.

Innovations at a glance

- > Light and ergonomic
- > Perfectly shaped for large or small hands
- > Weight is well balanced for fatigue-free handling
- > Stress-free work via integrated step counter:
 - dispensing procedures can be continued error-free after an interruption or distraction
- > Central Combitip ejector: fully emptied Combitip can be easily ejected with one hand using the operating lever

Count on it! The clearly arranged and easy-to-read display guarantees stress-free and intuitive operation. In addition to the displayed dispensing volume, the step counter supports error-free filling, for example plates.

The integrated »Sleep« function switches off when the Multipette M4 is not being used, thus reducing energy consumption and saving battery life.
